Photogrammetry Options

Precision Dental Arts and iStack offers individual services to fit your needs. From Fully Guided or Bone Reduction to Free-Handed Surgery our Photogrammetry workflow work with all surgical procedures.

PHOTOGRAMMETRY
FULLY GUIDED
ISTACK

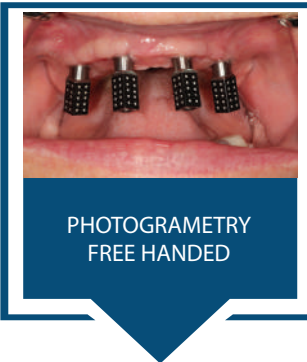

Our iStack Fully Guided solution is the ultimate in Precision Guided Surgery. iStack Fully Guided provides you with a metal base frame for bone reduction and a stackable base for your precision implant guided placement.

The Photogrammetry process then provides additional precision due to the presence of the metal base frame and the photogrammetry scan bodies.

GRAMMETRY
OPTISPLINT DIGITAL
WORKFLOW

- All-On-X Without Compromise
- OPTISPLINT is compatible with guided, navigation or freehand surgeries, enables efficient digital workflows, converts to an accurate verified cast, and requires less steps than other systems.
- We guarantee the accuracy of all OPTISPLINT KITS when they are used according to their instructions for use. All OPTISPLINT KITS are SINGLE PATIENT USE KITS.

PHOTOGRAMMETRY
FREE HANDED

Free-hand surgery offers a cost-effective option. The clinician uses our iStack diagnostic information to not only open the flap and place the implant but the diagnostics allow us to still utilize Photogrammetry and an immediate load solution. This method uses digital diagnostic planning and photogrammetry protocols to deliver amazing results.

PHOTOGRAMMETRY
BONE REDUCTION
FREE HANDED

Free-hand surgery offers a cost-effective option. The clinician uses our iStack diagnostic information to not only open the flap and place the implant but the diagnostics allow us to still utilize Photogrammetry and an immediate load solution. This method uses digital diagnostic planning and photogrammetry protocols to deliver amazing results.
